NTP/LET 14/0001

2014/01/10

STATUS UPDATE ON NTP'S RADIOCHEMICAL PRODUCTION FACILITY AS AT 10 JANUARY 2014

I would firstly like to wish you all everything of the very best for 2014 and thank you for your loyalty and support to date.

As indicated in my communication of 19 December 2013, the Regulator has sought further clarification on issues arising from the submissions made. These clarifications were duly prepared and timeously submitted and there has subsequently been intensive fruitful engagement between NTP and the Regulator. During a meeting yesterday it was agreed that the Regulator would grant NTP approval to resume operation by the middle of next week subject to their acceptance of revisions to some of the submitted documentation.

Once this approval has been received we would initiate a return to service program which would involve a planned ramp up of production levels bringing the plant back to full production at the beginning of February 2014. We will be contacting each of our valued customers individually during the course of next week to clarify the supply schedule going forward.

We thank you for the patience and understanding to date and look forward to soon getting back to business as usual.

Regards

DG Robertson
